

GHULAM DASTGIR

Computer Science Student | Full-Stack Developer | AI Developer

+92-312-6957039 ghulamdastgir12905@gmail.com Lahore, Pakistan

SUMMARY

As a results-driven Computer Science student at FAST NUCES, I have hands-on experience in developing full-stack web applications and AI systems. My proficiency in the MERN stack and Python, along with my contributions to innovative projects, has honed my problem-solving and collaboration skills, making me an adept software engineer ready to tackle complex challenges

KEY ACHIEVEMENTS

Project Delivery and Technical Proficiency

Delivered over 4 end-to-end projects, including AI-powered systems and real-time applications, showcasing strong technical and collaborative skills

SKILLS

React	JavaScript		
Express.js	Tailwind	HTML	
ES6+	Node.js	PostgreSQL	
Microsoft SQL Server			
MongoDB	SQL		
RESTful API	OpenCV		
Python	scikit-learn		
Pandas	NumPy	Matplotlib	
JWT	bcrypt	Git	GitHub
Postman	C/C++		

EDUCATION

BS Computer Science

FAST National University of Computer and Emerging Sciences (NUCES)

01/2023 - Present
Lahore, Pakistan

PROJECTS

PRISM – Biometric Presence Verification System

01/2026 - 04/2026

Campus attendance was vulnerable to proxy fraud and identity spoofing, requiring a reliable verification solution.

- Designed a full-stack biometric presence verification system using MERN and FastAPI.
- Implemented AI-driven facial recognition and liveness detection with OpenCV and MediaPipe, along with dual-mode authentication (face + fingerprint).
- Developed a scalable backend with confidence scoring, anomaly detection, and encrypted biometric templates for secure processing.
- Reduced proxy attendance and identity fraud risk to near zero in testing environments.

Expense Tracker App

06/2025 - 08/2025

An application to track personal finances securely across multiple currencies

- Built a full-stack finance management application using React, Node.js, and PostgreSQL.
- Developed a responsive frontend (React/Vite, Tailwind CSS) and secured backend APIs using JWT authentication and bcrypt hashing.
- Implemented multi-currency support, timezone handling, and receipt storage for enhanced usability.
- Delivered a production-ready application with end-to-end security and fully responsive cross-device design.

Task Management System

01/2025 - 04/2025

A platform for teams to manage tasks and deadlines efficiently

- Designed and developed a full-stack task management platform using React, Node.js, and MSSQL.
- Engineered an optimized database schema and improved query performance for faster data retrieval.
- Implemented secure JWT-based authentication and integrated a responsive admin dashboard.
- Achieved a 40% reduction in task retrieval time and delivered a production-ready system for team collaboration.

Air Drawing – Real-Time Computer Vision Tool

03/2026 - 03/2026

Digital drawing tools require physical input, limiting hands-free interaction.

- Designed and developed a real-time, contactless drawing system using OpenCV and MediaPipe.
- Implemented hand tracking and gesture-based controls for drawing, erasing, and color selection.
- Optimized performance using motion smoothing, gesture debouncing, and dynamic brush scaling.
- Achieved low-latency, stable gesture recognition for seamless real-time user interaction.
