

GHULAM DASTGIR

Full-Stack Developer AI Developer

+92-312-6957039 • ghulamdastgir12905@gmail.com • Lahore, Pakistan

Summary

As a results-driven Computer Science student at FAST NUCES, I have hands-on experience in developing full-stack web applications and AI systems. My proficiency in the MERN stack and Python, along with my contributions to innovative projects, has honed my problem-solving and collaboration skills, making me an adept software engineer ready to tackle complex challenges

Experience

Amperor Tech

Software Engineering Intern

07/2026 - 08/2026

- Worked as a Software Engineer Intern building web development projects featuring agentic AI chatbot assistants
- Contributed to full-stack feature development across frontend and backend, collaborating with the engineering team on production-facing web applications
- Gained hands-on experience integrating conversational AI capabilities into real-world web products

10Pearls

MERN Stack Intern

08/2026 - 09/2026

- Worked as a MERN Stack Intern, developing and maintaining full-stack features using MongoDB, Express.js, React, and Node.js
- Collaborated with the engineering team on building and debugging responsive, production-quality web application components
- Collaborated with the engineering team on building and debugging responsive, production-quality web application components

Education

FAST National University of Computer and Emerging Sciences (NUCES)

Lahore, Pakistan

BS Computer Science

08/2023 - Present

Skills

React • JavaScript • TypeScript • Next.js • Node.js • Express.js • NestJS • Agentic AI • RAG • Tailwind • HTML • ES6+ • PostgreSQL • Prisma • MongoDB • Microsoft SQL Server • SQL • RESTful API • Swagger • GCP • OpenCV • Python • scikit-learn • Pandas • NumPy • Matplotlib • JWT • bcrypt • Git • GitHub • Postman • C/C++

Projects

PRISM - Biometric Presence Verification System

01/2026 - 04/2026

Campus attendance was vulnerable to proxy fraud and identity spoofing, requiring a reliable verification solution

- Designed a full-stack biometric presence verification system using MERN and FastAPI
- Implemented AI-driven facial recognition and liveness detection with OpenCV and MediaPipe, along with dual-mode authentication (face + fingerprint)
- Developed a scalable backend with confidence scoring, anomaly detection, and encrypted biometric templates for secure processing
- Reduced proxy attendance and identity fraud risk to near zero in testing environments

OpsFlow - AI-Assisted Corporate Operations Platform

07/2026 - 09/2026

Employee requests for expenses, purchases, and leave lacked policy-aware routing and a unified assistant across Slack and web

- Designed a multi-tenant AI-assisted corporate operations platform enabling employees to file requests via a web chat assistant or Slack
- Built a NestJS + Next.js monorepo with PostgreSQL and Prisma, integrating LangGraph and Gemini (@langchain/google-genai) for a tool-calling assistant agent
- Implemented policy-aware request routing with configurable per-manager spend delegations and multi-stage manager - finance approval workflows
- Developed a separate platform-admin plane for provisioning tenants, enforcing strict tenant isolation and role-based access control across every endpoint
- Delivered a production-grade Slack integration (OAuth install/login flows, event deduplication, role-based broadcasts) alongside a fully audited approval pipeline

AI Recruitment Pipeline Management System

07/2026 - 09/2026

Manual recruitment workflows lacked scalable, explainable AI-driven candidate screening and interview processes

- Designed and developed a capstone-level AI Recruitment Pipeline Management System using NestJS, Prisma, and pgvector
- Implemented AI-driven CV parsing, semantic candidate-job matching, and ranking using locally-hosted embeddings (HuggingFace Transformers)
- Built an AI voice interview system with LangGraph-orchestrated conversation flow, Groq (LLM/Whisper/TTS), and MediaPipe + TensorFlow.js client-side proctoring
- Integrated Retrieval-Augmented Generation (RAG) for company-policy-grounded HR explainability chat and automated candidate email notifications via Brevo
- Architected role-based (Super Admin/HR Admin/Hiring Manager) tool-calling assistant workflows with confirmation-gated mutating actions and full audit logging

Smart Parking Management System with Agentic AI Assistant

07/2026 - 09/2026

Manual parking management lacked real-time occupancy tracking, automated billing, and self-service booking across multiple lots

- Designed and developed a full-stack Smart Parking Management System using NestJS, Prisma, PostgreSQL, and Next.js (React 19)
- Implemented QR-code based check-in/check-out, live slot occupancy tracking, and automatic overtime/extension billing via a scheduled monitoring cron
- Built "Adam," an in-app AI assistant using LangGraph and Gemini with role-based tool access (RBAC) and confirm-before-mutate safeguards for sensitive actions
- Developed a policy-document RAG tool using locally-embedded (HuggingFace Transformers) brute-force cosine search for AI-assisted policy Q&A
- Deployed both services to Google Cloud Run with Dockerized CI/CD via Cloud Build, Supabase Postgres, Socket.IO real-time sync, and hardened security (helmet, RLS, rate limiting)
